Abstract

One or two sentences providing a **basic introduction** to the field, comprehensible to a scientist in any discipline.

Two to three sentences of **more detailed background**, comprehensible to scientists in related disciplines.

One sentence clearly stating the **general problem** being addressed by this particular study.

One sentence summarizing the main result (with the words "**here we show**" or their equivalent).

Two or three sentences explaining what the **main result** reveals in direct comparison to what was thought to be the case previously, or how the main result adds to previous knowledge.

One or two sentences to put the results into a more **general context**.

Two or three sentences to provide a **broader perspective**, readily comprehensible to a scientist in any discipline.

Methods

We report how we determined our sample size, all data exclusions (if any), all manipulations, and all measures in the study.

Participants

Material

Procedure

Data analysis

Results

\begin{figure}

}

\caption{Bee plot of the example data set. Small points represent individual observations, large points represent means, and error bars represent 95% confidence intervals.}

\end{figure}

`apa_print()` will help you report the results of your statistical analyses. The function will format the contents of R objects and produce readily reportable text.

Now, you can report the results of your analyses like so:

Race is related to reading scores after accounting for SES, $F(5, 14,063) = 184.91$, $MSE = 127.63$, $p < .001$, $\hat{\eta}_p^2 = .062$.

What's even more fun, you can easily create a complete ANOVA table using by passing `mod_results$table` to `apa_table()`, see Table 2.

Discussion

51 **References**

Table 1

Descriptive statistics of reading scores by race

race	Mean	SD	Min	Max
A	60.65	16.14	33.71	115.04
AI	51.29	9.68	33.78	102.66
B	52.63	10.37	33.41	113.45
H	50.44	9.68	33.14	107.71
HPI	54.58	12.52	34.30	104.81
W	55.72	11.20	33.22	164.33

Note. This table was created with apa_table()

Table 2

ANOVA table for the analyis of the example data set.

Effect	F	df_1	df_2	MSE	p	$\hat{\eta}_p^2$
Race	184.91	5	14,063	127.63	$< .001$	.062

Note. This is a table created using apa_print() and apa_table().
